

## MORE ABOUT...

### ...REDUCING WASTE

Our Ultra-Concentrated solutions are compact and efficient, removing the need for large chemical drums

### ...REDUCING COSTS

By having a sleek wall-mounted dispenser, we alleviate the burden of shipping, disposing, and recycling large chemical drums putting more money back in your pocket

### ...BOOSTING PERFORMANCE

Do you ever feel like you're spending too much time and energy worrying about your Commercial water treatment needs? Our proprietary formulations give you back the time you need to avoid unwanted distractions and to focus on your business!

- 1. Simpler, Low-Cost Freight** – Ultra-Concentrates - even with a hazardous materials declaration - are far less costly to transport vs. drums! Shipping traditional drum products translates into shipping water and the cost of shipping water is high. Utilizing Ultra-Concentrates could save a water treatment service company and end use customers hundreds to thousands of dollars in annual overall freight costs!
- 2. Easier, Safer Handling** – Volume reduction in utilizing Ultra-Concentrates translates into an easier handling profile. Instead of moving 30 or 55-gallon drums you are moving 1 gallon or 4-gallon cased containers. It is far easier and safer to handle the smaller containers vs. traditional drums!
- 3. Greener** – Ultra-Concentrates do not require drastic changes in product formulations. No wasted energy or use of inert binding agents or formulation aids to get the products to be in final form. LiquiLogic uses a far simpler and more straightforward approach that translates directly to being Greener, as there is no increase in carbon footprint or energy consumption. LiquiLogic Ultra-Concentrates utilizes the advantage of levels of concentration to help reduce recycling volumes and carbon emissions.
- 4. Serious Water Savings** – Unlike solids, Ultra-Concentrates do not require water to remake/resolubilize the product! No water lines or backflow or overflow issues at all! Ultra-Concentrates do not require any water at all to apply, allowing for a truly Plug N Play system!
- 5. Fewer Variances, More Consistency** – Unlike Solid to Liquid to Dispense products, since we do not require water to resolubilize, we do not have applied water pressures or temperature or chemical dissolution variances which can affect the consistency of the made solid solutions! Ultra-Concentrates are in final blended form, are homogeneous and are truly Ready to Use!
- 6. Reliability** – High quality Ultra-Concentrates utilize proven, respected and well-known raw materials in the water treatment industry! Ultra-Concentrates do not represent “new” chemistries. They are a simplified no-touch way to apply products without extraneous water dilution. They also do not need any formulation aids like extra caustic or solvents which are inherent to traditional drum treatments. This leads to a higher percentage of raw material actives and low percentages of any kind of inert materials.

## MORE ABOUT...

### ...FUNCTIONALITY

Our products require no external water lines or emergency procedures for backflow and overflow. Simplicity is designed to be wall mounted, allowing for more room in your facility! No more chemical drums taking up valuable floorspace!

### ...DELIVERY EFFICIENCY

Our Products come in convenient 1-4 Gallon containers and utilize compact, wall-mounted dispensers, making it much easier to ship than 55 Gallon drum alternatives.

### ...USAGE MAXIMIZATION

Our Product is an ultra-concentrated liquid, eliminating the worry about product overflow or product dissolution stability.

7. **Truly Customizable** – Ultra-Concentrate products can be privatized to reflect the specific product formulations or raw material components customers would prefer. This leads to more effective formulations that offer better performance thanks to a truly customized chemical program.
8. **Fully Scalable** – Ultra-Concentrates are not just for smaller applications - they can be scaled up to include any size container and dispenser option! For Ultra-Concentrates (unlike Solid options) there are no limitations to scale. Want Ultra-Concentrates in tote bins to apply to a large facility, no problem!
9. **Better Product Selection** – Microbiocide selection for solids is very limited! Ultra-Concentrates have a far wider raw material base with a broader biocide selection. Solid to Liquid to Dispense chemistries are limited to whatever raw materials can be bound or absorbed and not all raw materials can be turned into solids. And that process requires substantial amounts of inert ingredients.
10. **Affordability** – Ultra-Concentrates have similar use application costs vs. traditional drum products and certainly compete vs. Solid to Liquid to Dispense! When you equalize the cost vs. the far lower application rates per pound, you find that Ultra-Concentrates are very cost competitive. Simplicity dispensers for Ultra-Concentrates are just capture tanks and are very cost competitive vs. Solid dispensers!

## Ready to Learn More?

Now's the time to take control of your Water Treatment Costs! LiquiLogic provides a simpler and safer option when it comes to applying water treatment chemicals to your system.

Our wall-mounted Simplicity System helps to reduce your costs associated with freight and recycling chemical drums. LiquiLogic can custom design a Simplicity System to fit your needs. We supply all of the ultra-concentrates and equipment necessary for a quick installation to get you up and running fast!

Call us today at 855-927-6543 or visit us at [LiquiLogicLLC.com](http://LiquiLogicLLC.com) to learn more!
